

Co-Pilot™

...another feature of ThinkWise™ Technology

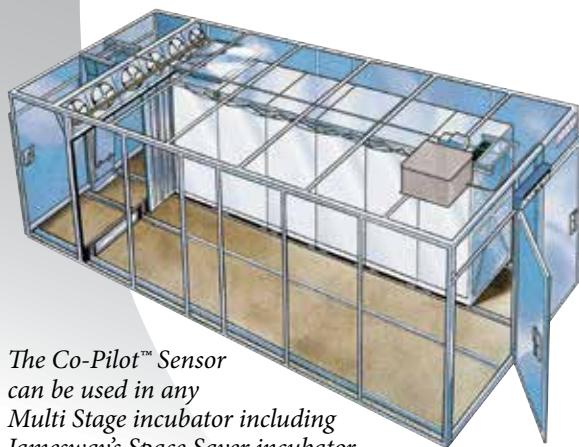

Measures Temperature and Humidity in Any Multi Stage or Single Stage Machine!

Co-Pilot™ Temperature and Humidity Sensor

Jamesway's innovative Co-Pilot™ Sensor is a combined temperature and humidity sensor that automatically tracks the temperature and humidity within your single stage or multi stage machines.

The wireless, egg shaped sensor fits in any egg flat anywhere within your machine and provides accurate readings to 0.1°C for temperature and 2% for humidity.

Get an 'inside look' at the temperature and humidity within your machines and experience the ability to download a day or a week of data at your convenience.

The Co-Pilot™ Sensor can be used in any Multi Stage incubator including Jamesway's Space Saver incubator with patented Laminar™ Air Flow introduced in 1959!

Co-Pilot™ works in any Single Stage incubator including this Jamesway Platinum 2.0™ Single Stage incubator with WiseView™ windows option and embedded Delta Drive™ software, features of ThinkWise™ Technology introduced in 2013!
